

**NAME**

`cpmv` — copy move

**SYNOPSIS**

`cpmv` source mode uid gid [dest1 dest2 ...]

**DESCRIPTION**

The `cpmv` command is similar to the `move` command in that it copies the *source* file to the destination files and sets the mode, user id and group id (*mode*, *uid*, and *gid*, respectively) of the *destination* files. Unlike the `move` command, however, `cpmv` does not remove the *source* file.

**FILES**

`/tmp/cpmv<pid>`

**SEE ALSO**

`mv(1)`, `cp(1)`, `move(1)`
