NAME

idump — dump an inode

SYNOPSIS

/etc/idump [—]inumber [...] device [...] [[[—]inumber [...]] device] ...

DESCRIPTION

Idump dumps all information about inode number *inumber* from the specified *device*(s). If the '—' is not specified, *idump* will print the inode structure information.

If the '—' is specified, *idump* throws the actual contents of the file onto the standard output. If the file is a directory, the output is formatted to look like an "ls -af".

SEE ALSO

ls(1), dir(5), fs(5)
